Energy System Reliability and Diablo Canyon

California Energy Commission,

Closing the Diablo Canyon Nuclear plant will reduce the reliability of the California grid and will result in increased CO2 emissions. Some of the lost generation will be replaced by wind and solar, but not all of the lost generation. These are simple undeniable facts. Please keep the Diablo Canyon Nuclear Plant operating and producing CO2 free electricity, for the reliability of the CALIFORNIA grid and to reduce climate change.

Respectfully,

R. Stuart Bondurant
