Closure of Diablo Canyon

I am strongly opposed to the continued operation of the Diablo Canyon Nuclear Power Plant. The plant is old and a recommendation by PG&E to close it down should be enough for the Governor to pay attention and follow the recommendation. Pumping such large sums of money into an unwise plan for extended use should be used to promote the development and installation of renewable energy operations and individual homes.

There is still no solution to a storage of the toxic waste accumulated thus far. Where will it go? Who will pay for disposal? Who but the most desperate and poverty stricken populations will end up with it?

It's on earthquake fault lines and a shake up will come at some time in our future.

Look at what is happening in the Ukraine with a power plant. There are enough crazies in our world to do the same here.

This is madness. Do not extend operation of the plant. Use funding to do what is right for the future.

Sincerely, Melinda Forbes
