now is not the time to get rid of clean, carbon free energy

Now is not the time to be shutting down clean, carbon free energy, Diablo provides one sixth of California's clean electricity. It will generate \$20B in electricity costs through 2045 and with Lake Mead being just pitiful and the Colorado drying up, it could help with providing desalinated water from the plant. We need all the green energy we can right now, not selections of it, the best here and best there. All of it, we are battling an uphill battle where California is unfortunately one of the most affected.
