No Extension for Diablo Canyon Reactor!

I'm writing in to express my concern about the proposed extension for the Diablo Canyon reactors. CA should stick to the joint agreement, approved by the CA Public Utilities Commission, which put the reactors on track to be closed by 2025. Diablo Canyon is close to multiple fault lines, a fact which was not apparent when the reactors were constructed. This means that they are not built to withstand earthquakes. Any movement along the fault lines near Diablo would be disastrous, and could result in a nuclear meltdown. This proximity to fault lines is the main reason why I oppose the Diablo Canyon extension. CA should maintain the timeline it agreed to in the joint agreement.
