Decommission Diablo Canyon nuclear plant

As we realize the need to step away from fossil fuels, please leave uranium in the ground and invest in renewable, safe energy sources. We need major R&D investments in renewable energy sources as well as storage.

We cannot afford uranium extraction pollution, expensive to maintain nuclear plants, potential accidents or terrorist attacks on nuclear sites, and the extremely expensive issues of nuclear wastes we still don't have solutions for, and nuclear plants decommissions that will be a financial burden for generations and a safety hazard.

Please don't bring Diablo Canyon out or retirement. The planet and the next generations need you to make the best, healthiest, safest decision. We're counting on you to show visionary leadership. Thank you.
