Diablo Canyon reactor

You know all the reasons that Diablo Canyon must be shut down. So shut it down.

How many people are employed in solar and wind energy in California? About 70, 000.

How many are employed at Diablo Canyon? About 1500. Nuclear was always a bad idea. Now, it is a sad reminder of how often public agencies make truly insane mistakes. Nuclear power is not the affordable, safe, economically-sound wave of the future.

And not one dime of subsidy, not one dime period, should go to the criminal enterprise, PG&E

Of course, you could wait for another Fukushima or Chernobyl, or an earthquake beneath Diablo Canyon, or for a situation like the Ukrainian nuclear reactors are in. Will some imbalanced person crash an airplane into Diablo Canyon?

Diablo Canyon reactor is an accident waiting to happen. Don't say you were not warned how unsafe this power plant is. And I have not even discussed so many topics, like radioactive waste.

Shut it down!
