Against operation of Diablo Canyon beyond 2025

This nuclear plant is old, unreliable and seismically vulnerable. PG&E can not be trusted given its poor track record with wildfires. All parties must respect the agreement to replace it with renewables. Ratepayers and taxpayers have already paid \$85 m in mitigation costs. Where and how will the extra high-level waste be stored? How will it's now unlawful cooling system be fixed and has that cost been calculated?
