Close Diablo Canyon by 2025

As a CA taxpayer and southern CA utility ratepayer I ask that CA closes Diablo Canyon by 2025 and does not lend PG&E \$1.4 Billion. Instead use that money to escalate investment in clean renewables (solar, wind, battery storage, energy efficiency, demand response, building electrification) to provide reliable and flexible grid support, especially during the very limited time of peak summer demands.

Diablo Canyon did not help in the 2020 extreme weather events.

PG&E must fix its wires to prevent more PG&E-caused wildfires which are not only devastating to people and the environment but also to its own transmission lines which are unable to provide power during peak demands.

Also, CAISO should not export unnecessary energy when peak demands are projected.
