Don't allow Diablo to continue operating!

Dear California Energy Commission,

I'm a member of a group that opposes Diablo Canyon nuclear power plant. Our group is called BARC.

We think nuclear energy is too expensive and dangerous and that alternatives exist that are cheaper and safer. As PG&E customers, cheaper alternatives to the expensive energy generated at Diablo Canyon is a huge consideration. And safety is paramount. While Diablo hasn't YET had a nuclear accident, we've taken a huge risk because of nearby earthquake faults and now there's fracking in the area. Studies show that fracking can create earthquakes!

"Deeply grounded studies from Stanford's Amory Lovins, Mark Jacobson and others have long shown that at least since 2018, the clearly marked transition to rooftop solar, off-shore wind, battery arrays, LED efficiency are more than ready to power the state and nation cleanly, reliably and efficiently This quickly deployable green transition means plummeting power costs, booming employment and general prosperity." Aug. 19, 2022, Harvey Wasserman, in the "LA Progressive".

Please do not allow Diablo to remain operating past the agreed upon and scheduled closure date.

Thank you for your consideration of this critical request.
