Keep Diablo Canyon Open

California's ambitions to mandate electric vehicles is laudable but without maintaining and expanding it's clean power it is just whistling in the dark. Making every vehicle electric will be mission impossible without a tripling of the electric power. That power must be clean power and it must be reliable. Diablo Canyon must be kept running and all California's nuclear plants should be reopened. Nuclear power is rated the safest power on the planet and almost 100% of its energy can be recycled back into fuel for advanced reactors which have already been shown to be viable and are being constructed in China right now. If California wants to lead the way in clean energy they can't do it without nuclear power.
