

The Equitable Building Decarbonization Program

Helen Walter-Terrinoni

VP Regulatory Affairs

we make life better®

Life-Saving Warmth

Consistent supply of
air- and water-heating
at a reasonable cost is
essential

Hot water for health

Water-heating must reach a sufficient temperature to sterilize laundry, instruments, dishes, etc.

How do we take the “emergency” out of emergency replacement?

- Increased capacity of, or adding, an electrical panel
- Running electricity to “machinery rooms”
- Retrofitting radiant heat
- Etc.

Affordable heating for families

- Reliability
- Shift to peak loads in winter

How do we work
with all stakeholders
to address needs?

Affordable, reliable access to essential heating and cooling while reducing greenhouse gas emissions
