2023 Rebates needed

When the bill was signed in 2022, all material indicated that the rebates would be available in early 2023. We started planning a heat pump installation for this year to replace our old inefficient air conditioner and gas furnace. We are very disappointed that there will not be a retroactive application of rebates for projects completed prior to the program's details being worked out. We are working on a very tight budget but need to replace the A/C before it fails mid-summer....and we want to make the best long-term choice for our household and the environment. Is there really no way to work in retroactive rebates for those of us that are ready to start right away with energy-efficient upgrades? Thank you
