Dear Mr. Clendening:

I am interested in the most recent data 2022 on PG&E as to their "power mix." That is what sources PG&E—owned generation and power purchases based on type. For example:

Renewables

- Biomass & Biowaste
- Geothermal
- Small Hydroelectric
- Solar
- Wind

Coal

Large Hydroelectric

Natural Gas

Nuclear

Other

Unspecified Power (Electricity purchased through open market transactions and not traceable to a specific source)

If this information is also available for the past few years - say 2018, 2019,2020 would also be helpful for comparison.

Finally do you maintain information on average Kwh pricing for the combined sources?

Thanks,

Charles
