Memo

To: Fountain Wind LLC From: Kaitlyn Heck, Air Quality Specialist
Project/File: Fountain Wind Energy Project Date: May 17, 2023

Reference: Air Quality Technical Memorandum for the Fountain Wind Energy Project

INTRODUCTION

Purpose

The purpose of the Air Quality Technical Memorandum (Memo) is to respond to data requests related to air quality from the California energy Commission's review of the Fountain Wind Energy Project's (Project) Opt-In Application for Certification (23-OPT-01).

In 2019, an Air Quality and Greenhouse Gas Analysis (2019 Analysis) was prepared by ESA Consulting for a previous iteration of the Project. The 2019 Analysis evaluated the air quality and GHG emissions associated with constructing and operating a 72 wind turbine project with a total, permanent disturbed area of 180 acres. The updated Project would reduce the project scope to 48 wind turbines with a total, permanent disturbed area of 120 acres. This Memo compares the air quality emissions associated with the previous project, as determined in the 2019 Analysis, to those emissions associated with the updated Project.

Project Location

The project site is located approximately one mile west of the existing Hatchet Ridge Wind Project, six miles west of Burney, 35 miles northeast of Redding, immediately north and south of State Route (SR) 299, and near the private recreational facility of Moose Camp. Other communities near the project site include Montgomery Creek, Round Mountain, Wengler, and Big Bend.

Project Description

The Project proposes to construct 48 wind turbines with a total nameplate capacity of 205 megawatts (MW) as well as associated infrastructure and facilities. These facilities would include a 34.5-kilovolt (kV) overhead and underground electrical collector system to connect turbines together and to an on-site collector substation; overhead and underground fiber-optic communication lines; an on-site switching station to connect the Project to the existing regional grid operated by the Pacific Gas and Electric Company (PG&E); a temporary construction and equipment laydown area; nine temporary laydown areas distributed throughout the project site to store and stage building materials and equipment; an operation and maintenance (O&M) facility with employee parking; up to four permanent meteorological evaluation towers (METs); temporary, episodic deployment of mobile Sonic Detection and Ranging (SoDAR) or Light Detection and Ranging (LiDAR) systems within identified disturbance areas (e.g., at MET locations); two

Reference: Air Quality Technical Memorandum for the Fountain Wind Energy Project

storage sheds; and three temporary batch plants. New access roads would be constructed within the project site, and the existing roads on-site would be improved.

ENVIRONMENTAL SETTING

Air Quality

The Project lies within the Northern Sacramento Valley Air Basin (NSVAB), which includes Shasta, Tehama, Glenn, Butte, Colusa, Sutter, and Yuba counties. The Shasta County Air Quality Management District (AQMD) oversees air quality resources in Shasta County. Among its responsibilities, the Shasta County AQMD monitors concentrations of particulate matter and ozone (O_3) air pollutants that could affect public and environmental health.

Criteria Air Pollutants

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards for outdoor concentrations. These standards are designed to protect the most sensitive persons, such as children, pregnant women, and the elderly, from illness or discomfort. Criteria air pollutants include O_3 , nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), particulate matter 2.5 microns or less in diameter ($PM_{2.5}$), particulate matter 10 microns or less in diameter (PM_{10}), and lead (Pb). It is noted that reactive organic gases (ROG) — also known as reactive organic compounds or volatile organic compounds (VOC) — and oxides of nitrogen (NOx) are not classified as criteria pollutants. However, ROG and NOx are widely emitted from land development projects and participate in photochemical reactions in the atmosphere to form O_3 ; therefore, emissions of ROG and NOx are relevant to the Project and are of concern in the air basin.

Ambient Air Quality Standards

The Shasta County AQMD is charged with maintaining or reaching attainment for criteria air pollutants. Criteria air pollutant thresholds are set at the national and state levels. The National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) were determined by the U.S. Environmental Protection Agency (EPA) and California Air Resources Board (CARB), respectively, and define the maximum amount of an air pollutant that can be present in ambient air. The Shasta County AQMD is in nonattainment for ozone and PM_{10} .

METHODOLOGY

Construction and operational emissions of criteria pollutants were calculated based on the same methodology used within the 2019 Analysis prepared by ESA Consulting. The updated calculations relied on the methodology and modeling inputs used within the 2019 analysis, but updated the inputs to account for the reduction in Project size and relied on more up to date models and emission factors (i.e., consistent with the updated traffic study [Westwood 2023]). Moreover, this analysis also assumed that all construction equipment on the project site would operate for 10 hours per day. The 2019 Analysis utilized a less conservative assumption and modeled construction equipment as operating for 4 to 8 hours per day.

Reference: Air Quality Technical Memorandum for the Fountain Wind Energy Project

Consistent with the 2019 Analysis, the construction and operational emissions were calculated with the California Emissions Estimator Model (CalEEMod), CARB EMFAC, and helicopter emission factors. It was assumed that total graded material, hauling and worker trips, and helicopter operating hours would be reduced by 33% to account for the reduction in site size and the proposed number of wind turbines. Modeling assumptions and output files are provided in Attachment A.

Based on the 2019 Analysis, it was assumed that construction phases may occur concurrently during Year 1 and Year 2. Concurrent activities for each Project component that would emit the greatest amount of daily emissions would be as follows:

Year 1 of Construction

- Timber Removal and Grubbing; and
- Grading and Access Road Work

Year 2 of Construction

- Turbine and Transformer Installation;
- Substation and O&M Building Installation;
- Underground Collector System; and
- Overhead Collection Systems.

RESULTS

Construction

Construction emissions are generated from off-road construction equipment, worker and hauling vehicle trips, and dust emissions from unpaved roadways. Table 1 below shows the unmitigated construction emissions from the updated Project compared to the emissions calculated in the 2019 Analysis.

Table 1: Unmitigated Construction Emissions

Phase	Source	ROG	NOx	PM ₁₀	PM _{2.5}

Percent Difference		-24.48%	-10.53%	-21.14%	-21.31%

*Similar to the 2019 analysis, turbine and transformer installation vehicle emissions represent only the portion of the trips that would occur within Shasta County AQMD's jurisdiction.

** Review of the 2019 Analysis demonstrates that pick-up trucks were not included in the modeling. This analysis calculates the emissions from the use of off-road pick-up trucks consistent with the construction equipment list.

Source: Stantec, 2023.

As shown in the table, all emissions under the updated Project would be reduced as compared to the 2019 Analysis, with the exception of Year 1 ROG emissions. This increase in Year 1 ROG emissions is likely attributed to the increased hours of operation for off-road equipment. However, as shown in Table 2, with implementation of the mitigation required under the 2019 Analysis, which requires the use of Tier 4 Final equipment and implementation of fugitive dust control measures, Year 1 ROG emissions would be reduced to below the 2019 emissions level.

Table 2 below shows the mitigated construction emissions from the Project compared to the 2019 Analysis.

*Similar to the 2019 analysis, turbine and transformer installation vehicle emissions represent only the portion of the trips that would occur within Shasta County AQMD's jurisdiction.

** Review of the 2019 Analysis demonstrates that pick-up trucks were not included in the modeling. This analysis calculates the emissions from the use of off-road pick-up trucks consistent with the construction equipment list.

Reference: Air Quality Technical Memorandum for the Fountain Wind Energy Project

As shown in Table 2, with implementation of the required mitigation, all construction emissions under the updated Project would be reduced as compared to the 2019 Analysis.

Operation

Operational emissions associated with the Project would be generated from worker vehicle trips, maintenance of the wind turbines, and operations, maintenance, and testing of the back-up generator. Operations were assumed to be similar to the 2019 Analysis but were estimated using updated modeling and emission factors. Additionally, while the 2019 Analysis assumed that the back-up generator would be diesel-fueled, the back-up generator for the updated Project would be fueled by compressed natural gas or propane. Table 3 below shows the unmitigated operational emissions from the updated Project compared to the emissions calculated in the 2019 Analysis. As shown in the table, all emissions under the updated Project would be reduced as compared to the 2019 Analysis, with the exception ROG emissions. The increase in ROG emissions is attributable to the change in fuel type for the emergency generator. It is noted that the Shasta County AQMD Level A Threshold for ROG emissions is 25 pounds per day. As a result, although the emissions in ROG would increase to 6.09 pounds per day under the Project, total emissions would remain below the Level A Threshold, and the conclusion of the analysis would remain the same.

Table 3: Unmitigated Operational Emissions

Project Component	ROG	NOx	PM ₁₀	PM _{2.5}
Operational Emissions (pounds per day)				
Worker Vehicle Emissions	0.90	0.80	54.51	5.60
Maintenance Work with Cranes and Mowers	0.47	4.63	0.22	0.20
Emergency Generator Testing and Maintenance	4.72	0.45	0.03	0.03
Total	6.09	5.88	54.76	5.83
2019 Analysis Operational Total	1.55	8.19	55.00	6.01
Percent Difference	292.93%¹	-28.18%	-0.45%	-3.07%

¹ Note that this perceived increase in ROG results from using more plausible and conservative estimations of construction vehicle operation times (10 hrs/day vs the 4-8 hrs/day estimated in the 2019 analysis).

Conclusion

As presented within this Memo, with proposed best management practices, construction of the updated Project would result in fewer criteria pollutant emissions as compared to the previous version of the project that was evaluated in the 2019 Analysis. During operations, the updated Project would result in fewer emissions of NOx, PM₁₀, and PM_{2.5} as compared to the previous version of the project that was evaluated in the 2019 Analysis. While emissions of ROG were determined to increase under the Project, the ROG emissions would still be well below the Level A Threshold established by the Shasta County AQMD, and the less-than-significant impact determination would remain applicable. Overall, the Project would result in a less-than-significant impact related to air quality, and new or more severe impacts beyond what was evaluated in the 2019 Analysis would not occur.

Notes:

2019 concrete volume derived from 2019 Air Quality and Greenhouse Gas Emissions calculations.

Emission factors obtained from AP-42 Table 11.12.6.

PM2.5 fraction of PM10 is 0.674 (SCAQMD. 2006. Final Methodology to Calculate PM2.5 and PM2.5 Significance Thresholds.

Website: [http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/particulate-matter-\(pm\)-2.5-significance-thresholds-and-calculation-methodology/final_pm2_5methodology.pdf?sfvrsn=2](http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/particulate-matter-(pm)-2.5-significance-thresholds-and-calculation-methodology/final_pm2_5methodology.pdf?sfvrsn=2)

Proposed Project would construct 48 wind towers as compared to the 2019 analysis which assumed 72 wind turbines. Therefore, only 67% (48 / 72 = 0.67) of concrete required in 2019 would be required for the Proposed Project.

Operational Vehicles

Project Characteristics -

Land Use -

Construction Phase - Operation only

Off-road Equipment - provided

Off-road Equipment - operation only

Trips and VMT - operation only

On-road Fugitive Dust - operation only

Grading - total acres graded and material exported assumed to be ~0.67 of 2019 assumptions

Vehicle Trips - operational vehicle trips based on 2019 analysis

Water And Wastewater - water use updated to be consistent with project assumptions

Construction Off-road Equipment Mitigation - based on 2019 assumptions

Operational Off-Road Equipment - cranes and mowers would be used during operations - consistent with 2019 project analysis

Fountain Wind, Operations - Shasta County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Stationary Sources - Emergency Generators and Fire Pumps - assume 8 hours maximum to be operated

Stationary Sources - Emergency Generators and Fire Pumps EF - generator emissions calculated off model

Road Dust - 94% paved

Project Characteristics -

Land Use -

Construction Phase - Operation only

Off-road Equipment - provided

Off-road Equipment - operation only

Trips and VMT - operation only

On-road Fugitive Dust - operation only

Grading - total acres graded and material exported assumed to be ~0.67 of 2019 assumptions

Vehicle Trips - operational vehicle trips based on 2019 analysis

Water And Wastewater - water use updated to be consistent with project assumptions

Construction Off-road Equipment Mitigation - based on 2019 assumptions

Operational Off-Road Equipment - cranes and mowers would be used during operations - consistent with 2019 project analysis

Fountain Wind, Operations - Shasta County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Stationary Sources - Emergency Generators and Fire Pumps - assume 8 hours maximum to be operated

Stationary Sources - Emergency Generators and Fire Pumps EF - generator emissions calculated off model

Road Dust - 94% paved

Project Characteristics -

Land Use -

Construction Phase - Operation only

Off-road Equipment - provided

Off-road Equipment - operation only

Trips and VMT - operation only

On-road Fugitive Dust - operation only

Grading - total acres graded and material exported assumed to be ~0.67 of 2019 assumptions

Vehicle Trips - operational vehicle trips based on 2019 analysis

Water And Wastewater - water use updated to be consistent with project assumptions

Construction Off-road Equipment Mitigation - based on 2019 assumptions

Operational Off-Road Equipment - cranes and mowers would be used during operations - consistent with 2019 project analysis

Fountain Wind, Operations - Shasta County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Stationary Sources - Emergency Generators and Fire Pumps - assume 8 hours maximum to be operated

Stationary Sources - Emergency Generators and Fire Pumps EF - generator emissions calculated off model

Road Dust - 94% paved

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

Project Characteristics -

Land Use -

Construction Phase - Construction schedule provided, no construction anticipated during winter months (January through March).

Off-road Equipment - provided

Off-road Equipment - construction equipment provided. Turbine delivery trucks modeled within hauling truck trips.

Off-road Equipment - construction equipment provided

Trips and VMT - construction trips pulled from 2019, reduced based on project description

On-road Fugitive Dust - per 2019 CalEEMod assumptions

Fountain Wind, Year 2 - Shasta County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Grading - total acres graded and material exported assumed to be ~0.67 of 2019 assumptions

Vehicle Trips - construction only

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Water And Wastewater - construction only

Construction Off-road Equipment Mitigation - based on 2019 assumptions; reduction percentages based on SCAQMD fugitive dust reductions and CalEEMod assumptions

Fleet Mix -

Stationary Sources - Emergency Generators and Fire Pumps -

Project Characteristics -

Land Use -

Construction Phase - Construction schedule provided, no construction anticipated during winter months (January through March).

Off-road Equipment - provided

Off-road Equipment - construction equipment provided. Turbine delivery trucks modeled within hauling truck trips.

Off-road Equipment - construction equipment provided

Trips and VMT - construction trips pulled from 2019, reduced based on project description

On-road Fugitive Dust - per 2019 CalEEMod assumptions

Fountain Wind, Year 2 - Shasta County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Grading - total acres graded and material exported assumed to be ~0.67 of 2019 assumptions

Vehicle Trips - construction only

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Water And Wastewater - construction only

Construction Off-road Equipment Mitigation - based on 2019 assumptions; reduction percentages based on SCAQMD fugitive dust reductions and CalEEMod assumptions

Fleet Mix -

Stationary Sources - Emergency Generators and Fire Pumps -

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.2 Turbine and Transformer Installation - 2025**Unmitigated Construction On-Site**

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**Fountain Wind, Year 2****Shasta County, Winter****1.0 Project Characteristics****1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Heavy Industry	1.00	1000sqft	0.02	1,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	82
Climate Zone	3			Operational Year	2026
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Construction schedule provided, no construction anticipated during winter months (January through March).

Off-road Equipment - provided

Off-road Equipment - construction equipment provided. Turbine delivery trucks modeled within hauling truck trips.

Off-road Equipment - construction equipment provided

Trips and VMT - construction trips pulled from 2019, reduced based on project description

On-road Fugitive Dust - per 2019 CalEEMod assumptions

Fountain Wind, Year 2 - Shasta County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Grading - total acres graded and material exported assumed to be ~0.67 of 2019 assumptions

Vehicle Trips - construction only

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Water And Wastewater - construction only

Construction Off-road Equipment Mitigation - based on 2019 assumptions; reduction percentages based on SCAQMD fugitive dust reductions and CalEEMod assumptions

Fleet Mix -

Stationary Sources - Emergency Generators and Fire Pumps -

3.1 Mitigation Measures Construction

Fountain Wind, Year 2 - Shasta County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.2 Turbine and Transformer Installation - 2025**Unmitigated Construction On-Site**
