## Learn about Government Funding for Home Electrification and Energy Efficiency Improvements

The Equitable Building Decarbonization Program was created to reduce greenhouse gas (GHG) emissions from homes, with funding for installing energy-efficient electric appliances in low- and moderate-income households to put energy efficient technologies within reach of even more Californians. Attend an upcoming workshop to share your thoughts on draft guidelines and program roll-out.

We'll also discuss California's funding from the federal Inflation Reduction Act for home energy efficiency and all-electric appliance upgrades, and provide information on other available programs.
