Eligibility for energy efficiency investment in 2023

Hello California Energy Commission,

Living in Northern California with natural gas central heating results in very expensive energy bills during the wintertime. Since our household is multigenerational with large mortgages and property taxes, energy saving investment will be very beneficial to the home for both energy costs and environmental benefits of lower emissions. Unfortunately, the details of the Inflation Reduction Act (IRA) have been very slow, and our household had to invest in these items in advance of any formal publication of eligible rebate programs under the IRA.

I hope the Commission decides to make energy-saving investment in single family homes (completed and paid for in 2023) to be retroactively eligible for rebates once this program is finalized and applications can formally begin.
