Close Diablo Canyon

The decision to allow Diablo Canyon to continue is irresponsible, risky, not cost effective and endangers Californians. Given the built up nuclear waste, the proximity to earthquake faults and the potential for a catastrophic event, and the death of irreplaceable marine life, keeping Diablo Canyon open is an error of immense proportions. Aside from the public health issues, the decision does not make sense economically. The costs cannot compete with more economical renewable options and impedes the buildup of renewable options. Those costs are passed on to taxpayers, who, if the agreement is breached will be at risk of a nuclear disaster.
