Fountain Wind Project

This project is greatly needed by the local, state, federal and the world. We live in a world that is greatly impacted by the use of electricity and with the government regulations requiring solar rooftops and EV Car mandates, it is ever more important that we, as a society recognize the need to more energy production to satisfy the increasing use of electricity.

The best new energy production should be clean energy such as the Fountain Wind project brings to us. I am in favor of developing more clean energy projects whether it be solar, hydro or Nuclear. Gas and Oil fired energy projects should NOT be allowed. Wind has proven to be a reliable source of energy that is clean and efficient.

The needs of the greater population should outweigh the needs of the local community. Their concerns should be mitigated by providing other needs they have. There are many needs in rural California that should be considered as mitigating factors
