Project is not Long term Sustainable

This project is not a sustainable long term solution. The amount of tree removal and impact on local wild life, Indian tribal land, migratory bird routes, and limited lifespan of the wind turbines at 25 years is not a good solution for this location. This project will limit aircraft ability to fight wild fires affecting nearby homes and transmission lines is a huge issue and it will affect the ability of citizens to get insurance. The high tension lines have caused numerous fires such as the camp and Zog fires, already and adding more power coming thru existing lines or adding more lines create increase risk to the forest and environment than benefit of the power. The 100,000 of thousands of acres timber that have been burnt over past years do more for the environment by changing carbo dioxide to oxygen than the wind power does. We need to focus environmental efforts on preparing the forest to take fire and not get burnt to the ground. The wind zone is mediocre and hydro power and biomass regeneration plants are better suited for this location and would be more sustainable. I ask that this wind project not be pursued as this would negatively affect my home, surrounding wildland, and put our citizens lives at risk due to future fire issues.
