## **Timeline in CA**

CA Energy Commission Regulators:

I am writing to urge CEC to quickly finalize the Biden Administration's Inflation Reduction Act point-of-sale rebates for energy efficient and electrification projects. As you know, with attractive solar incentives being placed out of reach for all Californians and skyrocketing energy prices, California is taking a huge step back in its clean energy goals with regards to the residential sector. This not only angers everyday citizens, contributes to continued pollution, but threatens to eliminate tens of thousands of jobs for green contractors.

The public has patiently waited since 2022 for the Biden Administration and the CEC to get energy efficiency and electrification rebates in the hands of consumers. It is now 2024. Please make these rebates available as quickly as possible, as fairly as possible so that families can finally move forward with heat pump installations, energy efficiency, and electrical panel upgrades. Even if the rules require further modifications, please publish guidance consumers and contractors can use to make further plans, market rebates to consumers, and even get purchase and installation agreements signed pending finalization.

Best,  
Ricardo Gomez
