Support Fountain Wind Project

I am in favor of the Fountain Wind Project. Clean energy from wind and solar backed up with battery storage are the type of projects that we need to transition away from fossil fuel pollution which leads to global warming. This project will create many good jobs and provide a boost for the local economy. Since wind and solar energy generation is less expensive than fossil fuel generated energy, this project will help lower energy costs to consumers. Clean energy projects are necessary to provide energy security to the local area, state, and nation. This project and many more like it must move forward as fast as possible after clearing the permitting process.
