NO WINDMILLS

Wind energy is not proving to be effective, efficient, reliable, sustainable, or economical. Complete studies have been performed that prove that the "energy/resource" expended to construct the towers, blades, infrastructure, etc. needed to produce a functioning wind turbine does not "offset" by the energy it produces. This wind project is a box check, feel good, money making, scheme that in many definitions is in fact criminal. This does not include this specific project is clearly goes against the will of the people. The state aligning with this kind of project will end costing tax payers millions in lawsuits in the future. It is simple. Represent the will of the people. Be a representative. Listen to your constituents. Stop this project. The damage potential far out weighs the benefits. Property prices will be negatively effected. A comprehensive review of environmental impact will prove the project to be a net loss to our environment. Legal exposure. The list goes on. This project is not a well articulated solution nor well placed for California's energy issues. Do the right thing. Stop this project. Look for alternatives. Be an honorable leader/representative. Do the work to dig deeper. Hire a third party to perform comprehensive feasibility study!
