Group 2 Funding Recommendation

I am writing to request that you expand the parameters of your Group 2 funding recommendations to include, "Low-cost, energy efficient strategies to reduce household air pollution, which may include, but are not limited to, advanced sensing, filtration approaches, and ventilation approaches". Focusing solely on assessing air quality misses a critical opportunity to improve air quality through low-cost effective tools such as mechanical HEPA air cleaners. Such tools can improve indoor air quality and reduce health disparities for low-income Californians.

With appreciation for your consideration,
Anne Kelsey Lamb, MPH, Director
(Pronouns: She/Her/Hers)
