IRA 2022 Funds Threatened By New Administration

While officials of the CEC delay implementation of the HOMES Rebates and remain SILENT in addressing concerns of radioactivity of them, a real threat exists of withdrawal of federal program funds in the event of a new administration. Trust me it will happen; like the funding pulled from the CA High Speed rail project from SF Bay Area to Los Angeles Metropolitan Area. A segment of the superstructure sits near Fresno, CA, abandoned! I could not agree more with contributor Christian Bard Billson. It is unconscionable the IRA2022 was signed in August 2022 and here we are halfway into 2024 and nothing has materialized. Those with the most to gain financially are those most concerned with lining their pockets: contractors, so-called energy consulting entities, "aggregators," and landlords looking to get capital improvements on their property paid for on the American dollar. Wake up!
