Public Comment for California Offshore Wind, AB 525 Strategic Plan

Good morning Commissioners, my name is Tina Calderon. I work for Sacred Places Institute for Indigenous People as the Director of our Ocean Protectors Program.

As an Indigenous led organization with Chumash, Tongva & Acjachemen staff members whose traditional homelands include a good portion of the Southern California Coastline, we are very concerned about the potential dangers posed by Offshore Wind. We at SPI are very much concerned about the safety of all life in the ocean which we call kikikiĕ hi I Sxa'min in Chumash, our relatives of the underworld.

While we fully understand the need to reach zero-carbon electricity and our state's commitment to reach this crucial goal by 2045, we feel it is extremely important to complete the necessary studies to ensure we cause no further harm to the environment. We at SPI appreciate that identifying potential impacts and mitigating and minimizing those impacts through strategies on coastal resources, fisheries and Native American Indigenous Peoples is addressed in the plan, we are concerned that the need to meet goals is the overarching priority and mapping, though extremely important, does not take the place of long-term scientific studies.

Please keep in mind, offshore wind technology has already been installed on the East Coast of the United States so we are sure to learn about disturbances and safety or harms to ocean life in a relatively short span of time. We owe that much, to do our due diligence to fully understand the effect of installing this technology and where the safest placement will be.

Additionally, it is critical that all local Tribes are included in the planning of transporting energy across our lands to ensure no harm is done to our sacred sites and our burial sites are not disturbed.

We pray that you do the right thing and slow the process down as it is our responsibility to address climate concerns and new energy solutions in the safest way possible.

Thank you.
