Proposed Energy Storage

As a resident of San Juan Capistrano and a member of Saddleback Church I am appalled that our City Council would even consider the option of any battery storage within in our city limits. The ramifications of having this storage facility on Saddleback Church's property could affect multiple ecosystems, as well as, endangering our population, and the lives of our local firefighters. These batteries have been shown that they can be unstable and dangerous, and can have serious health risks to anyone exposed to them when they reach this extremely harmful position. Their volatile nature, and their ability to be so destructive to the environment they occupy, should make the decision to provide an alternative location for their storage an easy one. Find a safer location that can be more easily protected other than our amazing city.
