concern regarding proposed energy storage facility

I am writing as a concerned member of the public. I live very close to where the proposed lithium battery storage facility will be, and I have serious concerns about the safety of the proposed location of this facility. My family and our neighbors already have trouble getting our homes insured due to the high fire risk area we live in, and there is a lot of unmaintained brush in the hills behind our homes, where the facility would be. These types of facilities should not be located so close to all of our homes, in a residential area, and in such a high fire risk area, and with a stream going through the property. When lithium battery fires occur, they are difficult fires to extinguish and come with high risk of chemical exposure to the surrounding area. I am not sure why this area is even zoned industrial as it is a residential area. Please do not allow this lithium battery storage facility to be built so close to this residential area. It has the potential to be catastrophic for the community.
