PLEASE STOP lithium production near our homes

Rancho Capistrano is an HISTORIC property that deserves to be preserved in its current form for future generations. The adobe and buildings contained on the property date back CENTURIES and the lake and surrounding properties are an ecological preserve for countless species. Please do not allow it to be transformed into a lithium battery farm, with the potential destruction of all it contains, as well as the risk of contamination of neighboring areas.

Our history and our future will be in jeopardy with production so close to our homes and our water and our children.
