## **Independent tire testers thoughts**

Dear Sirs,

I am one of the few independent tire testers in the world, and have been for over 15 years. I champion the correct tire for the vehicle in order to improve the safety of our roads.

I work consistently with all the major tire manufacturers and OEs, and feel like I could offer insight into this proposal should you wish to hear it. I do not feel meeting OE rolling resistance (energy use) targets is the correct approach to reducing emissions of the state due to the significant impact it will have on driver and pedestrian safety.

I am more than happy to discuss this with someone anytime. You can see my body of work at [www.tire-reviews.com](http://www.tire-reviews.com)
