Natural Gas

Good afternoon,

This is a follow-up to my previous comment. Given general economic realities and the millions of homes and businesses that rely on natural gas and natural gas supported infrastructure, I don't think it's prudent to completely transition away from this energy resource. Natural gas is beneficial in countless ways, most of which is affordability and reliability.

That being said, if the state is committed to this transition, accomplishing this through the use of e-NG, RNG, hydrogen blends, or a combination therein is an option. I think maintaining, upgrading, and continuing to use natural gas infrastructure is imperative so that these alternative natural gas solutions can be employed. Ultimately, completely eliminating natural gas, natural gas appliances, and natural gas supported infrastructure would financially burden current and future generation rate payers beyond belief.

Thank you for your time.

Respectfully,
Burke Mills
