Sacramento, CA 95814

DOCKET 05-AFC-3
DATE FEB 23 2006
RECD. MAR 1 2006

Dear Mr. Worl,

Unfortunately, our power supply has not kept pace with the current and projected growth of homes and businesses in Riverside County. To avoid the rolling blackouts of a few years ago and the threat of more in the future, we need the Sun Valley power Plant proposed by Edison Mission Energy.

The blackouts of 2000 and 2001 have not been forgotten. I know that I do not want them to happen again. This is why we need Edison's proposed power plant.

Since Edison is will to invest \$250 million into our region, I see no better solution than to approve their project and insure our economic future is served by a steady source of power. t

Therefore, I endorse Edison Mission Group's Peak-Load Power Plant in Riverside County and hope you do as well.

Cordially,

ROBERT DOMENIGONI
P.O. Box 295
WINCHESTER, CA 92596

February 23, 2006

Robert Mr. Robert Worl
California Energy Commission
1516 Ninth Street, MS-15
Sacramento, CA 95814

Dr. Mr. Worl:

Please approve the proposed Edison Mission Energy power plant in Romoland. The Sun Valley Power Plant would help meet the needs of our fast-growing area by providing power when we need it most, during the summer when people are running their air conditioners.

Our fast-growing area needs new roads and new sources of water and power. This would be a key piece in the puzzle.

The proposed power plant will be used when energy is critically low and is powerful enough to run 165,000 home air conditioners. That means a lot to those of us who need air conditioning to help get through the hot summer months.

Please consider approving the project so that we have a stable source of power during the hot months when demand stretches our energy system.

Regards,

Evelyn Dominguez

To Whom It May Concern:

Western Riverside County is known as a fast-growing region with one of the healthiest economies in the nation. If you do not know, it is home to a thriving tourism economy that relies on a steady supply of power. Whether it is the wine refrigeration systems of the Temecula wine country or the casinos of our various tribes, we count on a reliable source of electricity.

To avoid the power outages of 2000, we need more sources of energy with those sources being produced in the state. Edison Mission Group is providing an opportunity to meet the needs of our region. Let's not pass on the opportunity this \$250 million project presents.

Sincerely,

Name Byron R. Zjust

I am writing to lend my support for the approval of the proposed Sun Valley Power Plant by Edison Mission Group in Romoland. As a longtime resident of the Inland Empire, a project such as this would help the economic growth of the area while insuring a steady power supply for the Inland Empire.

As mentioned in The Press-Enterprise article published Nov. 30, 2005, the Edison project would generate 500 megawatts and prevent blackouts during peak energy demand when air conditioners are running or when there is a power-grid emergency.

The project would also create about 200 construction and full-time jobs and generate millions of dollars for our local community.

I urge you to vote in support of the Sun Valley Energy Project.

Sincerely,

Gerald Barth

I support the approval of the proposed Sun Valley Power Plant by Edison Mission Group and I hope you. As a longtime resident of the Inland Empire, a new power plant project such as this would help the economic growth of the region by providing a steady power supply for the Inland Empire.

As mentioned in The Press-Enterprise, the Edison project would generate 500 megawatts and help prevent blackouts during summer when air conditioners are draining the system or when there is a power-grid emergency.

The \$250 million project would also create about jobs and generate millions of dollars for our local community.

I urge you to join me in support the Sun Valley Energy Project to guarantee a steady supply of power for our fast growing region.

Sincerely,

Dear Mr. Worl,

New development is important to our economic and social future. But with all the growth we are seeing, we also see a need for new roads, water lines and sources of energy.

I would like to see the construction of the Edison's proposed peak-energy power plant in the Romoland area. That is why I wanted let you know of my support for the proposed peak energy power plant.

If our region is to be able to grow and support new homes and businesses, we need more sources of power, such as the project proposed by Edison.

It would mean a great deal for our region is the power plant was approved—not only for the power it will produce, but also for the jobs and tax revenues it would generate.

Thank you for your time.

Respectfully,

Dear Mr. Worl:

Please approve the Sun Valley Power Plant by Edison Mission Group. The power plant project in the Romoland area would create energy when air conditioners and other appliances create electricity shortages, especially in July, August, September and the odd, record-setting February.

This power plant would create short-term and long-term jobs and generate millions of dollars in tax revenue while meeting the needs of a growing region.

Please vote in favor of the Edison project so we do not have to worry about blackouts.

Thank you for you time.

Sincerely,

Dear Commissioners,

I remember the blackouts of only a few years ago. I remember air conditioners switching off and the lights going out. With Southern California adding millions of new residents in the next 20 years, the problem is only going to get worse if we do not find new sources of power.

I do not want to go through blackouts again. That is why I want the Sun Valley Power Plant to be built. Edison Mission Group wants to spend \$250 million in our area which will create power, jobs and tax revenue. Why would we want to stop that?

Not only does the Inland Empire need this power plant, so does all of Southern California.

Please approve this project.

Dear Mr. Worl,

Riverside and San Bernardino counties have had to rely on private investment and regional revenue sources to meet its growing need for infrastructure.

Edison Mission Group's Sun Valley Peak-Load Power Plant in Romoland is an example of private enterprise meeting the infrastructure needs of our community.

We need the power this project would produce. We also need the hundreds of jobs and millions of dollars in tax revenue.

Considering our growing needs for new sources of power, I hope that we won't be forced to wait long for the power plant to begin producing energy and a much W taxes for our community.

Please approve this project for our region's future.

Sincerely,
