To. California Energy Commission

Subject : Request for Standards for-power Supplies Effective U-1 and U-2

We Konicaminolta Sensing., Inc are manufacturing Industrial Instruments and Medical Instruments and now trying to change AC adapters for our products to meet California Regulation which will be applied on July 2006.

However, the apply of the regulation is so fast that we cannot find AC adapter manufacturer who make the proper ones. Most AC adapter manufacturers in Japan are busy to try to change AC adapters for Information Technology Equipments to apply them to new California Regulation and are not in the situation to change AC adapters for our Industrial and Medical Instruments.

We DO ASK you the following things:

1. Please do not apply New California Regulation for AC adapters which used with Industrial Scientific and Medical instruments. (ISM)
2. Please delay of Standards for-power Supplies Effective U-1 and U-2 application to later than year 2010.

We appreciate your understanding for our situations in Japan.

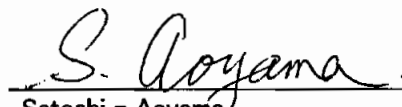

Thank you and best regards,
