Robert Worl
Project Manager
California Energy Commission
1516 Ninth Street, MS-15
Sacramento, CA 95814

Dear Mr. Worl:

On behalf of the Harvest Valley Community Council, I would like to provide our endorsement and support to the development to Edison Mission Group's Sun Valley Energy Project in the Romoland area of Western Riverside County.

Given the extraordinary growth in our region, demand for energy is constantly increasing. Edison's proposed peaker plant would help meet the region's need for electricity by providing enough energy to power an estimated 160,000 home air conditioners when the region needs the power the most - during the hot summer months.

The Sun Valley Energy Project represents a \$250 million investment in our community and will generate more than \$14 million in tax revenue for the region. It will also provide hundreds of construction jobs and on-going revenue for the Eastern Municipal Water District which will provide reclaimed water to the power plant.

Edison's natural-gas burning power plant uses some of the most advanced and efficient technology available to produce energy. Its Romoland site is located near existing infrastructure, such as natural gas and wastewater pipelines, a recycled water pipeline and the West Valley Substation. By locating to this industrial site, Edison reduces the need to build extensive power lines and other infrastructure.

For these reasons, the Harvest Valley Community Council resolves to support Edison Mission Group's Sun Valley Energy Project.

Sincerely,

Gene O'Brien

Gene O'Brien
