

My name is Theresa Acerro. I am the president of the Southwest Chula Vista Civic Association. We formed SWCVCA to provide a structured association for the residents, property owners, and business owners of the underrepresented Southwestern region of Chula Vista, to participate in the preservation, planning, development and protection of the unique character of the area through community education and group action. I want to present you with this petition by over 250 people living in the vicinity of this proposed peaker plant. Our request is simple. This is an inappropriate location. We want it located much further away from schools and residences.

I would like to reference this statement by the city of Chula Vista in regards to the Larkspur plant that casts doubt on the need for another peaker in this area, but if it is needed to get rid of the Southbay Plant then it needs to be located in a place further from residents and schools.

1. Chula Vista's demand is about 65 MW while the combined existing and proposed plants generate approximately 1,400 MW. If we actually need a peaker, it needs to go somewhere else. The landfill seems like a good choice.

2. It is totally unacceptable for the applicant to try to use as mitigation for air quality problems the potential for the current plant to emit.

1. The current plant is so inefficient and expensive to operate no one could afford to run it this many hours. And
2. The actual emissions of the new plant are excessive, because there are sensitive receptors within 400 feet. Their health cannot and must not be ignored by allowing the applicant to buy pollution credits or offset pollution in any way.

It is not clear to us what is being referred to as offset mitigation, but it is absolutely clear that under no circumstances should this or any other plant including existing one be allowed to emit any nonattainment pollutants and their precursors this close to sensitive receptors.

3. This is a picture from Goggle Earth with a line measuring 1 mile from the peakers new location on the site. I drew a circle showing a mile around the site. As you can see there are numerous homes within this circle and three public elementary schools, one high School and two Headstarts as well as a pre-K. There are also two Recreation Centers, a Health Clinic and several private schools and daycares within this circle. Several of the other peakers' reports had maps with one-mile circles. I am sure staff has the resources to do a better, more accurate job than I did. I believe staff's final report absolutely needs a map of this kind.
4. We are appalled when we look at the data on line for recently approved plants in southern California and compare their siting with the siting of this peaker plant. Again staff has access to more data not on line, but looking at the plants since 2001 that are on line it is obvious this plant should never have been approved in 2001. This location is totally inappropriate for this kind of a use. The closest residence to any of these other peakers is 1,000 feet. There are over 50 homes closer than this to this peaker! Only one peaker of 14 has an elementary school ^{as close} as close as the Chula Vista peaker plant. Actually this seems to be a violation of Title 5, which requires a 1500-foot buffer for new and proposed schools. It would seem that it should work in reverse as well for new and proposed ~~conflicting~~ uses. This needs to be examined in staff's report as well.

DOCKET	
07-AFC-4	
DATE	DEC 04 2007
RECD.	

5. Environmental justice needs to be considered here also looking at how close these homes are to the Chula Vista peaker compared to the others I can't help but wonder if, perhaps, the fact that the occupants of these 50 or more homes within 1,000 feet of the Chula Vista plant are over 80% Latino with a few black families and a few Anglo mixed in.
6. I have heard that the existing plant actually used older and dirtier technology than what was approved. This needs to be thoroughly investigated, and the plant torn down if it has been operating in a manner out of compliance with its initial approval. Actually we believe it should be torn down anyway and not replaced at all in the current location, because the environmental justice problems were not adequately taken into account in 2001.
7. This is a heavy industrial use in a light industrial zone. This is not appropriate. A precise plan modifying district and a CUP are not appropriate here for the following reasons:

19.56.041 P precise plan modifying district –

Application.

The P modifying district may be applied to areas within the city only when one or more of the following circumstances are evident:

- A. The subject property, or the neighborhood or area in which the property is located, is unique by virtue of topography, geological characteristics, access, configuration, traffic circulation or some social or historic situation requiring special handling of the development on a precise plan basis.
- B. The property or area to which the P modifying district is applied is an area adjacent and contiguous to a zone allowing different land uses, and the development of a precise plan will allow the area so designated to coexist between land usages which might otherwise prove incompatible.
- C. The basic or underlying zone regulations do not allow the property owner and/or the city appropriate control or flexibility needed to achieve an efficient and proper relationship among the uses allowed in the adjacent zones.
- D. The area to which the P modifying district is applied consists of two or more properties under separate ownership wherein coordination regarding access, on-site circulation, site planning, building design and identification is necessary to enhance the public convenience, health, safety

In addition, a skeletal plan of closely related future phases must be submitted and approved concurrent with the submittal of Phase I. Such skeletal plans shall indicate circulation, building locations, preliminary grading, areas devoted to landscaping, density, and parking.

The submission of each phase of the precise plan will require a new application and fee together with the required site plans. (Ord. 1632 § 2, 1975).

19.56.047 P precise plan modifying district –

Scope of planning commission and city council action.

In carrying out this section the planning commission and city council shall consider the principles set forth in CVMC 19.14.470 (Site plan and architectural approval – Principles to be observed) appropriate to the review of a precise plan. (Ord. 1632 § 2, 1975).

19.56.040 P precise plan modifying district –

Purpose.

See also CVMC 19.12.120 and 19.14.570 through 19.14.580. The purpose of the P precise plan modifying district is to allow diversification in the spatial relationship of land uses, density, buildings, structures, landscaping and open spaces, as well as design review of architecture and signs through the adoption of specific conditions of approval for development of property in the city. Within the boundaries of the P district, the location, height, size and setbacks of buildings or structures, open spaces, signs and densities indicated on the precise plan shall take precedence over the otherwise applicable regulations of the underlying zone. (Ord. 1632 § 1, 1975; Ord. 1356 § 1, 1971; Ord. 1212 § 1, 1969; prior code § 33.601(A)(3)).

The Findings for a Precise Plan and Modifying Standards under this ordinance cannot be made:

1. That such plan will not, under the circumstances of the particular case, be detrimental to the health, safety or general welfare of persons residing or working in the vicinity, or injurious to property or improvements in the vicinity.

The proposed project potentially will be detrimental to the health, safety and general welfare of residents and workers who live and/or work within 1,000 feet of it.

It likely will be injurious to property or improvements in the vicinity because it will downgrade the property values of the residents of the area and the new more commercial type of limited industrial uses moving into the area. Those of us living on Hilltop who can see the existing plant from our homes will definitely see the 70-foot exhaust stacks. According to the simulations shown at the community meeting people along Albany will see a tiny portion of these stacks as well. The stigma of living this close to such an inappropriate use as well as the negative health effects of the air contamination and the danger of the ammonia stored on site will degrade property values as well as people's health, safety and general welfare.

There is a particular concern for the health and safety of the 77 employees of Heartland Meat who work adjacent to this peaker. They are in and out of their facility and the parking lot all day long. This puts them in close proximity to the 12,000 gallons of ammonia stored on site as well as the emissions from the plant and ammonia slip and accidental spills.

2. That said plan satisfies the principle for the application of the P modifying district as set forth in CVMC 19.56.041.

None of the 4 principles-A, B, C, or D applies in this case. Actually allowing heavy industrial here will allow an incompatible use. This proposed use is not compatible with any of the commercial/light industrial uses envisioned for these new Voit warehouse buildings. It is also totally incompatible with the residential uses within 500 feet of the property and less.

7. A CUP cannot be issued for this use either:

The findings cannot be made for this reason:

"That the proposed use at the particular location is necessary or desirable to provide a service or facility which will contribute to the general well being of the neighborhood or the community."

This use will not provide a use or service of benefit to the southwest community. The electricity generated here will go into the grid. Solar collectors could generate the 65 MW that Chula Vista uses. In fact the two warehouses on either side of the current peaker have flat roofs that would be perfect for large scale solar installations such as HP and Goggle have recently undertaken. The amount to be invested in this new peaker could buy a huge amount of reliable clean solar energy. This particular location is inappropriate for a gas-fired plant. There are at least 3 other locations that would be much better and further away from sensitive receptors.

That such use will not, under the circumstances of the particular case, be detrimental to the health, safety or general welfare of persons residing or working in the vicinity, or injurious to property or improvements in the vicinity.

This use would be detrimental to the health, safety, and general welfare of the people working at Heartland Meat and the residents living within 1,000 feet of the peaker plant as the current facility is, which is why it should be ordered removed. There is the issue of ammonia slip. There appears to be no monitoring program to prevent this. There needs to be a plan made available to residents and businesses to deal with the accidental spillage of ammonia, the transport of ammonia, since the tank will need refilling approximately every 220 hours of operation, the route of trucks, safety precautions, and the consequences of an explosion. Would there be a toxic cloud of pollution generated? How far would it drift? How toxic is it? What are the negative health effects of the 5 or more ppm that will be part of the normal exhaust from the peaker? There does not currently appear to be any steel reinforcement of the tank, any attempt to disguise its location, or any special security or safety precautions.

That the granting of this conditional use will not adversely affect the General Plan of the City or the adopted plan of any government agency.

The General Plan specifically has wording to protect the integrity of the OVRP adjacent to this plant. The current plant is practically in the river bottom. Even tearing down the existing plant and moving a new one to the north will still leave the view of 70 foot tall stacks with heat/pollution waves coming out of them for most of the summer. This was the case with the existing plant for its first year of operation.

8. It was our understanding that this plant would be air-cooled. Why is potable water being wasted on cooling it? 85 acre-feet in this time of drought and shortage are excessive. Reclaimed water is available from the Otay Water Company. If the new plant were located at the Otay landfill where a 1,000-foot buffer will always be maintained, it would be close enough to the reclaimed water lines to be installed for Village 3 to connect to them. There is also the possibility that the methane produced by the landfill could power the plant instead of using scarce natural gas. This would be a win-win situation all around. Since the landfill already has a cogeneration plant on site most if not all of the needed infrastructure is already there. Several people have made inquires to Allied Waste and they are not opposed to this possibility.

Staff has already in their potential issues report expressed concern about the pollution, land use and the nearness to the Otay Valley Regional Park. We would add another concern due to the adjacency to the park. It is unfortunate but true that paintballers and people firing air rifles use the park illegally. This ammonia tank is way to close to a possible accidental strike. Please include our environmental justice and other concerns in future reports.

Sincerely,

Theresa Acerro
President of Southwest Chula Vista Civic Association
