RE: Power Plant Owners Form CEC-1304

In response to your December 7, 2007 invitation to review and comment on draft forms for electricity data collection, Geysers Power Company LLC submits the comments below related to Power Plant Owners Form CEC-1304.

- Schedule 1, Part A (of CEC-1304), line 4h asks for "Operating Mode" and line 4j asks for "Interconnection Agreement Type" to be entered; however the Instructions for this Schedule on Draft page 18 do not provide a listing of possible 'Mode' and 'Agreement Type' similar to those provided for "Operating Status" at the top of Draft page 19. It would help clarify what is expected if a similar listing for lines 4h and 4j were provided in the Instructions. We assume possible Modes would include Baseload, Peaking, and perhaps Load-following; but we are unclear as to what Agreement Type(s) the Commission expects to see.
- In the revised Instructions for Section 2 of CEC-1304 Schedule 3 Part A, distributed on December 12th, line 2c requests that "If equipment is being used, list the equipment manufacturer". It is not immediately clear if 2c is related to the 'wastewater disposal method' in line 2a, which in our case would be "Injection Well", or possibly to the 'average total dissolved solids' in line 2b. As there is no period at the end of line 2c, is it possible that some wording as to what this line relates to was omitted?

Should you have any questions regarding these comments, please let me know. I can be reached at 707-431-6077, or at DeanC@calpine.com.

Sincerely,

Dean Cooley
Director, Asset Management
