Hi Laiping:

It was nice talking to you a little while ago. I have the following response to your questions:

The SJVEC project has been withdrawn from the Cal ISO Generation Queue (Q #55) as of 11/13/07

Few other projects ahead of the KRCD project were also withdrawn from the ISO Queue but some of those projects were not modeled in the base cases and others were quite remote to have any significant impact on the results of the KRCD project.

Withdrawal of the SJVEC project has a significant impact on the KRCD Interconnection System Impact Study (ISIS) results and a sensitivity analysis was performed to determine the impact without the SJVEC project. The ISIS report issued on 7/30/07 shows both those results with and without the SJVEC project.

The Interconnection Facilities Study is expected to be complete by early May 2008.

If I can be of any further help, please feel free to write or call.

Sincerely,

Nisar Shah

Subject: Re: KRCD Community Power Plant

Hello Nisar,

How are you? I am reviewing the KRCD Community Power Plant Interconnection System Impact Study (SIS). The San Joaquin Valley Energy Center (SJVEC) is ahead of the KRCD in the ISO generation queue.

Could you let me know the status of the SJVEC?

Are there any projects that are in the generation queue may affect the results of the KRCD SIS, dated July 30, 2007?

When would the Facilities Study be completed?

Thank you very much for your help!

Laiping Ng
