RECD.	JAN 08 2008

Our family is opposed to the provision in the Title 24 "2008 Building Energy Efficiency Standards" which give the control of our heat and air conditioning to the public utilities companies. This should be only controlled by the people that pay the bills. We do participate in the SCE program that allows them to turn off my air conditioner during emergency electrical times and that is the way it should be. Not the State of California or other powers that be.

Maybe if you required the builders to put in energy saving equipment when a home is built. Such as windows where installed properly, doors and windows with weather stripping that works and the list goes on, people would not have turn up their heat or air conditioning to stay warm or cool. I am talking about my own home that is only 7 years old and has major heat and air problems. We have done what we can along with putting in energy efficient appliances, lights, and other items. So maybe you need to look at the other side of this problem. Inefficient way builder get away with substandard construction.

Sincerely,
Pozdzioch Family
