Chris Gekas

I am appalled, but not surprised here in the People's Republic of California, that government is once more considering ways to invade our privacy, control our lives, and generally impose Socialism.

The common sense option to the energy "crisis" is to BUILD NEW POWER PLANTS.... DUHHHH... nuclear power plants. The nuclear option would solve our energy issues; it has worked well for the French; and to point to the French as doing something better than we do is ridiculous but hey it's working and they've had no problems. Of course our elites don't want this, the conservationist loons etc but if government really is Of The People For The People and By The People, the people need something that works, is reliable, is energy **efficient**, and is affordable. Get off the PC bandwagon and don't impose this one size fits all solution which will not solve anything, impose more big government, and cost those who can least afford it.

Thank you for your consideration  
Carol Vrooman  
Ramona, Ca.

I predict future happiness for Americans if they can prevent the government from wasting the labors of the people under the pretense of taking care of them.  
Thomas Jefferson
