Subject: Remote programmable thermostats, etc.

Hello,

We were listening to KGO Radio this afternoon, and there was discussion about a possible plan to replace existing thermostats and other appliances with programmable ones that could be adjusted remotely in case of an emergency.

This would seem to be a desirable idea at first glance, but we can only hope saner heads will prevail and this will NOT be pursued. If citizens already feel the government is too intrusive, this would be the most extreme possible case of that. It cannot and must not be put into effect. We are very much in favor of practical conservation and energy saving measures, but this definitely takes that idea much, MUCH too far.

Thank you,
Carole and David Florian
