Bad idea!

What I'm talking about is freedom of choice,

What you're talking about is something different!

This is NOT a socialist state!

If implemented an electrical engineer and a guy with a smoky fireplace can go around that thermostat in a jiffy.

If I had a health condition, and was cold and needed heat or cooling in the summer, I think I would know better than you as to what temp to set it.

Oh by the way, if you implement people will hesitate to have their heater/air serviced or repaired when they could have a dangerous situation developing! Kind of like when you know you're sick but stay away from the doctor because he'll confirm it. Technology is a double edged sword. From the conservation point of view it looks good, but it treads on free choice the way it is right now! If an override was available in all instances then maybe. If no choice is granted, then I believe you're actions are Un-American and you should be investigated.
