Subject: Your not serious, are you?

I just read about Docket No. 07-BTSD-1. What load of **crap**! Do you want to regulate everything? Should I ask permission to take a shit? Do I have to wait for you to say "Simon **Sayz**"? The whole manmade 'Global Warming' circus is just a scam that is being played by the Global Government Crowd...Control Freaks who want to manipulate the smallest minutia of our daily lives and tax us while doing it - "Because it's for our own good." Pardon me if I don't feel guilty about being born into a system of greed and control.

If you were really serious about making this planet a much better place in which to live, you would take actions that would insure the release of Free Energy Technologies that already exist, in use by the **militatry** industrial complex, among other covert groups. But no....that's not even discussed. Instead, you have to have your fingers in every kooch on the block.

Al Gore is not your friend..

And by the way, I'm a REAL Environmentalist. If The Big Fossil Fuel Complex were ever to release it's Death Grip on this planet, the rest of us could turn things around real quick. We could have clean, cheap energy that would take us to the next stage of evolution.....unless of course you don't beleive in that 'myth' either.

Rant Complete....
