Subject: Docket No. 07-BTSD-1

This will not fly for long. At present we are setting our controls at a much lower level than any state agency will do because of pressure from senators and other governing people of California to set the temperature higher because they can afford it. We can't and we turn our heat off at night, and on in the morning for a while, it is off all day until we get home at night. The same in the Summer. Also we set the temperature at 70 in the winter, I'm sure this mandated temperature will be higher and probably will stay on all day except for peak hours where they will turn it down. But we are not home during the day and don't need it on. In the summer we set our AC at 80 not at the recommended 72 or what ever. So my bill will go through the roof and our energy consumption with it. Letting the Utilities regulate how much energy we use is like letting the fox guard the chickens. Why would they conserve past a certain level where their profits go down. They temperature will eventually get set at the point where they make maximize there profits without having to spend more on backup energy resources.  
I think this is nuts.
