Docket No. 07-BTSD-1

We strongly oppose Programmable Communication Thermostat us in any homes or building in the state of California!

"You realize there are times - very rarely, once every few years - when you would be subject to a rotating outage and everything would crash including your computer and traffic lights, and you don't want to do that," said Arthur Rosenfeld, a member of the energy commission.

What is Arthur Rosenfeld talking about? There is no way we would want this type of thermostat. We would take rotating outage to having big brother in our home. It is your job that we have enough energy. Spend your time and money building nuclear power plants and getting other energy. Enough of trying to control the citizens of California. No way does the energy commission have the right to control its Californians. It is **unAmerican!**
