Subject: Programmable Communicating Thermostats"

Dear Commissioner Pfannenstiel;

As a fifty-three year resident of the state of California I was horrified to hear that the commission is considering a revision to Title **24** that will require "programmable communicating thermostats" be installed in all new homes and remodels of existing air conditioners. This is an overly intrusive proposal. It is **NOT** the government's business to determine what temperature is acceptable in private homes.

As a commission you should be looking into how to supply adequate electricity for your population. Please use our tax dollars wisely. There is a demand so please increase the supply.

I'm curious, why does the government think this is a good idea? I am **OPPOSED** to the government installing "programmable communicating thermostats."

Sincerely,
Lisa Foltz
