Subject: New construction Temp control

Gentlemen and ladies

Please reconsider carefully the installation of thermostats in new construction that can be **regulated/controlled** at a remote location during an emergency. Consider rather building new power plants. This intrusion of Government into our lives is not the America our founding fathers envisioned for us. You have the power to stop this and continue the voluntary program now in place. I need **not** go into the possibility of injury or even death that could result from the loss of power to a fragile individual given that there are no safeguards on the remote control of thermostats.

Thank you for your time and consideration.
