Sirs,

How outrageous can you get proposing that private industry should have the "right" to control our energy use. This is Orwell "1984" straight from his book - government controlling everything - more intrusion into our lives.

STOP this now!!! Government is like a big cancer - it keeps on growing and consuming and nothing ever gets any better - there is always another created agency to support but it doesn't provide any benefit to the public - just a bunch of paper shufflers to provide more statistics.

NO, NO, NO - WE don't want you in our homes. We do not want your "radio controlled thermostats" for any reason.

Mrs. Michael Lampson
