Docket # 07-BSTD-1."

I heard on a local TV news broadcast about this issue and first thought it was a joke. I obtained your email address through the internet as a place to provide public input. I hope your address is correct since I want to go on the record as ADAMANDLY OPPOSING this ridiculous proposal.

I have discovered that our state government, and energy service providers, are actually intending on imposing further Orwellian energy proposals. I am particularly outraged with the recent attempt to place a government controlled radio receiver upon my heater/airconditioning thermostat. I reject the government interfering in my personal life and in the sanctity of my private home. I am shocked that there are actually people out there, involved in our government or public policy, that think the public will stand still for this type of control.

All of this follows low volume flushing toilets, prohibited fireplaces, low volume faucets, prohibited incandescent light bulbs, etc. Enough is enough. This has gone WAY too far.

I thought we defeated Communism for the most part but I see it is alive and well in the state of California.

I will hold our elected officials and representatives accountable should this measure pass. Each citizen should make our elected officials understand that we will not tolerate this horrible idea.

Neil Pearson
