We are absolutely against the California Energy Commission's proposal to control the use of energy in an individual's home. We feel it is an illegal invasion of privacy. If that is the case, why not simultaneously control the use of gasoline in automobiles, the books and newspapers we read, the friends we associate with and so on and so on.

We're sure there are other methods for providing power via wind, sun and water, even nuclear that will stem the problem of usage during peak times, but because of political wrangling on the both the federal and state level have not been developed and utilized.

The California Energy Commission seems to be overreacting to a effect of a problem without doing anything about the cause, which is much bigger than the individual homeowners.

Sincerely,  
Joel and Brenda Fugazzotto  
Kentfield, CA
