I am voicing my opinion on this proposed plan

The California Energy Commission is proposing a plan which allows the government to regulate household thermostats in the event of an "energy crisis."

After writing and erasing several of my real comments I will simply state that this is preposterous and absurd. Please as a respected commission put your heads together and do not try to create a Marxist California with this proposal. Throw it out the window now and let's get back to the drawing board.
