Background

On August 10, 2007, MMC Energy submitted an Application for Certification (AFC) to construct and operate the CVEUP, a simple cycle electrical power plant facility in the city of Chula Vista, San Diego County. The CVEUP would be a natural gas-fired simple cycle power plant and would have a nominal capacity of 100 megawatts. Primary equipment for the generating facility would include two General Electric LM6000 combustion turbine generators. The generators would connect to the existing 69 kV transmission line that currently serves the existing 44.5 MW Chula Vista Energy Project. If approved, the proposed project would be constructed on the northern portion of the existing 44.5 MW Chula Vista Energy Project site. As part of the proposed project, the existing 44.5 MW power plant would be decommissioned, dismantled, and removed.
